

Netflix Clone – Frontend Project Synopsis

Introduction

Netflix Clone is a responsive frontend web application inspired by the Netflix platform. It enables users to browse movies and TV shows, explore categories, search content, and experience a modern streaming interface. The project showcases responsive web design, reusable components, API integration, client-side routing, and performance optimization.

Objectives

- Develop a responsive Netflix-inspired interface.
- Build reusable UI components.
- Display movies by genre.
- Implement search functionality.
- Integrate movie data using a public API or mock backend.
- Follow frontend best practices.

Scope

The project is limited to frontend development. Authentication, streaming, and user accounts are simulated using mock data or local storage.

Expected Outcome

A professional-quality streaming platform frontend demonstrating responsive design, intuitive navigation, modern UI/UX, and frontend development skills.

Future Enhancements

- User authentication.
- Personalized recommendations.
- Watchlist.
- Video playback.
- Backend integration.
- Reviews and ratings.
- Multi-language support.
